- One-Step Products

Description: Sil-Kleer is a non-hazardous filter aid material that works on Rotary Vacuum Drums and Filter Press systems.

Product Benefits:

- **Safer to Use.** Sil-Kleer is not a carcinogen (it contains less than .1% silica (almost none) compared to D.E. with up to 60% silica). And because it is packaged in 34 lb. bags, it is a much easier for the operator to handle.
- **Works in both Rotary Vacuum Drums and Filter Press Systems.** It is excellent for use in both Rotary Vacuum and Filter Press systems. When used with rotary vacuum filters, Sil-Kleer cakes exhibit less cracking than other filter aids.
- **Non-Hazardous.** It is not a hazardous waste and can be easily disposed of. Some cakes used for food processing can even be recycled as components in animal feed. In the U.S., this application has been approved by the Association of American Feed Control Officials (AAFCO).* *IFN 8-26-242
- **Reduces Maintenance.** Because of the physical characteristics of Sil-Kleer , the cake is not mud-like and backwashes off the filter cloth or screen more completely. The Sil-Kleer cake flushes out of the filter without clogging pipes or drains.
- **Increased Filtration.** Due to the light weight, 20 to 50% density advantage, Sil-Kleer offers twice as much filtration, pound for pound, than diatomaceous earth. A Sil-Kleer filter cake density is only 7 to 12 lbs. per cubic foot, or a dry density range of 6 to 10 lbs. per cubic foot. Sil-Kleer users can realize substantial savings in filtration operations with a better filter aid at less cost.
- **Provides Easy Cake Release, which reduces labor and increases productivity.** Because of its light weight, Sil-Kleer provides easy cake release at the end of a filtration cycle. This facilitates filter equipment cleaning. Manpower requirements are reduced and productivity is increased.

Packaging: Sil-Kleer is available in 34 lb bags (24 to a pallet).
